Maximize Calypso's leading financial markets solutions with Synechron's deep business & technology expertise

For financial institutions looking to leverage all the advantages of Calypso and get the most from their investment, Synechron applies expertise in the financial markets to our core competencies across Digital, Technology and Business Consulting services. Synechron delivers to our clients:

Accelerated Projects

Our deep Calypso knowledge, both technical and functional, allows us to optimize implementation and integration initiatives and reduce time-to-market. By delivering projects with a full respect to Calypso standards, software will be quicker and simpler to upgrade in the future.

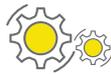

Minimized Risk

Deep experience in financial products, compliance and business processes means we can help you avoid potential transaction or regulatory issues. With advanced development processes and optimal test coverage, we minimize the risk of failure in production.

Reduced Total Cost of Ownership

Our testing capabilities, application management and support services are cost-effective and customizable to your specific requirements. By adhering to Calypso standards, implementations are cheaper and easier to maintain.

Greater Efficiencies

We enable clients to realize increased productivity in their most vital functions by optimizing performance with our technical experts and rationalizing operating models with our business experts.

The 6 ways we help clients unlock the full potential of Calypso

Synechron offers six proven solutions that can help your organization get the most from your technology investment.

1 Pre-study

We offer our expertise and services in the areas of gap analysis, cost estimation, solution planning, testing strategy, and project management.

2 Implementation

Our expertise encompasses infrastructure, architecture, configuration, specification, custom coding, testing, training, change management, and release management.

3 Testing

Our team can perform functional and technical Systems Integration Testing. Additionally, we perform regression, performance and stress tests as well as support user acceptance tests. Tests can be performed manually or automated for long-term efficiency.

4 Support

We provide Level 1 to Level 3 Information Technology (IT) support, monitoring and trailing of the production environment and performance investigations. Our team is focused on user satisfaction.

5 Maintenance

Our team will keep applications up and running with corrective or evolutive maintenance. We adapt to our clients' methodology and can help instill an Agile process.

6 Upgrade

Synechron creates custom roadmaps including data models and custom code migration, health checks, security audits, testing strategies, and collaboration with vendors.

Some use cases

Global Calypso Implementation for a Leading European Bank

Synechron successfully established the post-trade processes, specifications and development for customized confirmations, settlements and accounting across over 20 locations.

Version Upgrade for a Large European Bank

After an in-depth pre-study of the upgrade, including reverse-engineering of the highly-customized existing implementation, we specified and tested a completely new solution, successfully delivering a major upgrade.

Service Center Management for the Prime Brokerage Unit of a Prominent Banking Institution

After defining Key Performance Indicators (KPIs), Synechron provided maintenance services, Level 2 IT support, analysis, specifications development, testing of new functions, and execution of upgrades for a major banking institution.
